

The Zone[®] NAILING AREA

An Average Roof Requires Thousands of Properly Placed Nails.

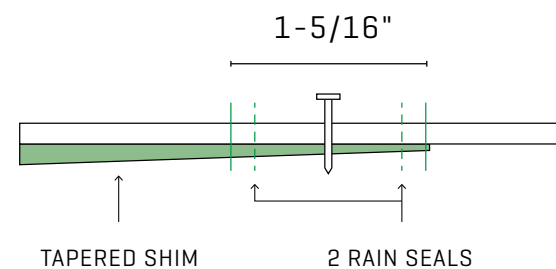

The Zone® Larger Nailing Area

Malarkey's patented wider nailing area and common bond overlap, helps ensure that every nail hits and penetrates both shingle layers for maximum protection from nail pull-out and shingle uplift, while double rain seals add extra protection from wind-driven rain.

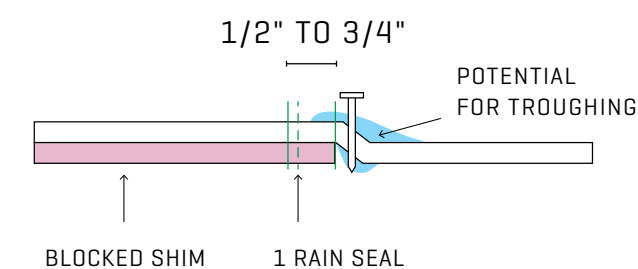

Our Tapered Shim (Backing)

helps the shingle lay flat and shed water without interruption. Standard shingles leave a ridge that can create troughing [when water runs sideways under the shingle and then down a misplaced nail, resulting in leaks].

Malarkey Shingle Nailing Area

Standard Shingle Nailing Area

Malarkey Shingle Nailing Area - [1-5/16" wide, 2 rain seals]

Standard Shingle Nailing Area - [1/2" to 3/4" wide, 1 rain seal]
