TECHNICAL BULLETIN

INSTALLATION OF ROOFTOP SOLAR/PV EQUIPMENT RELATIVE TO MALARKEY WARRANTIES

Malarkey Roofing Products® allows the installation of compatible solar and/or photovoltaic (PV) panels, cells, and similar rooftop appurtenances on warrantied roofing projects, but certain conditions apply:

1. Malarkey roofing shingles and accessories are warrantied to be free of manufacturing defects when installed in compliance with our latest published installation instructions.
2. Installation of solar/PV systems must also strictly adhere to those of the PV manufacturer. The ability of the roofing surface to shed water as intended must not be compromised.
3. The solar/PV equipment, related flashings, and installation are not covered by a Malarkey warranty nor is any damage to the underlying roofing system during its installation. Damage resulting from installation of a solar/PV system does not constitute a manufacturing defect and is not covered by the warranty.

Should leaks result and Malarkey is able to determine the cause is related to a shingle manufacturing defect, full warranty coverage would apply. Refer to our *Shingle & Accessory Warranty* for complete details.

Malarkey recommends homeowners have their *roofing contractor* review any proposed solar mounting penetration details as well as the installation methods intended for use prior to initiating the work. Solar/PV assemblies being considered in coastal areas should contact Malarkey Technical Services for approval of those systems. These consultations will be useful for avoiding potential problems when integrating solar/PV equipment with the Malarkey roofing system.

Malarkey Technical Services is available from 7:00 am to 5:00 pm, Pacific Time. Call (800) 545-1191 or (503) 283-1191, or email us at malarkey.technicalinquiries@amrize.com.
